

From now on, a motorhome can be converted quickly, easily and to meet any requirement

Meet us at the VÖHRINGER INSPIRATIONSTAGE: New possibilities for multiple use of a motorhome

Just in time for the Caravan Salon in Düsseldorf, Vöhringer will present to the motorhome and caravan industry at its INSPIRATIONSTAGE where new ideas for installation and conversion are heading. The designers of the premium supplier from Trochtelfingen will impressively show visitors new ways of flexibility, weight reduction and the many possibilities of design and the use of innovative technology using the example of a motorhome.

And they have a lot to offer. In the form of so-called VMODULS, the design department under the direction of Martin Ross developed a colourful bouquet of design ideas. The so-called VModules, which are made of our own tried and tested materials such as VLIGHT BASICS and many materials from the V.I.T.Vöhringer Innovation Technology series such as VFLEX, VUNDER TECH, VSTRONG, V3D COMPOSITE, serve as the basic material for the illustrative examples.

Due to the intelligent and innovative combinations of these materials and the increasing demands on flexibility, lightness and stability of the interior design, almost nothing will be impossible in the future.

Multiple use of a motorhome: storage compartment or saddlebag?

Vöhringer is also one of the first to impressively demonstrate new possibilities for multiple use of a motorhome.

With the help of an ingenious rail system, storage compartments can be installed and removed in no time at all.

The storage compartments are designed in such a way that they are either very useful as storage boxes in the interior that can be expanded as desired, or they can be removed completely and attached to the luggage rack as practical trendy bicycle saddle bags for quick shopping. The storage space in the rear can be equipped with a removable bicycle rack while riding. Once at the destination, it is parked next to the vehicle. This creates additional living space in the motorhome. If you want to take your pet with you, simply replace the bicycle stand with the dog box.

From a mobile workplace to a comfortable travel companion in no time at all

With extremely light and therefore particularly handy materials, the innovative system creates maximum flexibility and guarantees that a motorhome can be converted, for example, from a mobile workplace to a comfortable travel companion for the whole family in just a few steps.

The very stable and surprisingly light materials are weather-resistant, easy to attach and available in a variety of décors.

An excerpt from Vöhringer's wide range of modular solutions:

/ Wardrobe with space for a mobile camping toilet

The spacious wardrobe offers enough space in the lower section to store a mobile camping toilet. It can be removed in no time at all and replaced by a wet room.

/ Removable bicycle station for two bicycles

The removable bicycle stand can be attached to the rear of the vehicle during the journey by means of a rail system. When you arrive at your destination, simply remove the bicycle stand and park it next to the vehicle. This way they do not take up valuable living space. Optionally, the bicycles can then be protected from wind and weather with a roll-up tent.

/ Storage space and saddle bag in one module

Storage compartments integrated into the vehicle can simply be removed from the rail anchorage and attached to the luggage carrier as a saddle bag. So you are ready for a bike trip or shopping in no time at all.

/ Dog box

The alternative to the bike station. Your four-legged friend can also travel safely and comfortably in it.

/ Sideboard box

The multifunctional box is not only a practical storage space that can be opened upwards and to the side with a pull-out. There is also the option of folding a small table top upwards. This creates a workstation or dining area.

/ My home is my workstation

In view of the fact that more and more people are looking for a self-sufficient home office space, Martin Ross' development team has responded by integrating a mobile workstation. Thanks to the use of VUNDER TECH material, the height-adjustable workstation is a real lightweight. It is also user-friendly and very robust.

/ Plenty of space with the kitchen of a new kind.

The VLIGHT BASIC and VUNDER TECH products ensure that a standardised kitchen chassis can be used in a very space-saving way, very light and reduced to the bare minimum. Thanks to an intelligent design solution, handling for installation is much easier and more efficient than with conventional kitchens.

/ The wet room of the new generation

Thanks to VUNDER TECH material, colour comes into play. An end to the white/beige monotony. Adaptation to the overall look of the living space is now possible. The visually very appealing module is of course waterproof and the complete wet cell can also be moved or removed.

/ Perfect sleeping for the first time with two longitudinal beds over 2 metres long

What is otherwise only possible with vehicle lengths of 6.40 m and more could already be marvelled at in the Vöhringer Concept Camper 2021: on request, two longitudinal beds with a bed length of 2 metres each can be installed. Additional free space can be used during the day by folding it to the side.

The basis of the VModule: Vöhringer Innovations Technology (V.I.T.) and VLIGHT BASICS.

With its products VFLEX, VUNDER TECH, VSTRONG and V3D COMPOSITE, Vöhringer has been setting new standards in lightweight construction for some time now, not only for the caravan and motorhome market but also for other target markets such as interior design, trade fair, event and contract construction.

/ VUNDER TECH for furniture parts: is very stable and can nevertheless be formed into a wide variety of shapes. At the same time, it is very light and water-resistant.

/ VFLEX for flexible fleece elements: sound-absorbing, breathable, pleasant to the touch and light.

/ V3D COMPOSITE for three-dimensional cladding: is sound-absorbing, breathable, has a pleasant feel and reduces weight.

/ VSTRONG for floors: has a very low weight per unit area and exceptionally high flexural strength, is water resistant and lightweight.

VLIGHT BASICS

In addition to the innovative V.I.T. materials, Vöhringer focuses on its VLIGHT BASICS. Thanks to the coating of panel materials and its own furniture production for the caravan and motorhome market, VÖHRINGER, as an international system supplier, is a reliable partner in this industry. In its basic range, Vöhringer supplies panel materials, profiles, furniture and construction parts mainly made of wood, but also PU (polyurethane), PET, EPS and XPS. With the VLIGHT BASICS, VÖHRINGER agrees on the variety of shapes in lightweight construction by combining a wide range of materials.

Premium system supplier for future markets

The premium solutions (coatings, profiles, furniture elements and PU products) are in demand worldwide. Under the umbrella brand "VÖHRINGER INNOVATIONS TECHNOLOGIE" (V.I.T.) with the products VFLEX, VUNDER TECH, VSTRONG and V3D COMPOSITE, the medium-sized company sets international standards in the future market of lightweight construction. In addition to the caravan and motorhome market, where VÖHRINGER is a partner of the top manufacturers with its innovative products, the VÖHRINGER team also develops lightweight construction innovations for other target markets. These include laboratory equipment as well as applications in the areas of office, interior design, trade fair, event and object construction.

"Always one step ahead" celebrates its 100th company anniversary this year

This year, the Swabian family-owned company celebrates its 100th anniversary. Vöhringer was founded in 1921 and has its origins in wood processing. The first products were darning eggs, embroidery hoops and iron handles. Later, the company moved into plywood production. For five decades, the company has been a supplier to the motorhome and caravan industry and has grown to become a premium supplier in this sector.

Driven by an inventive spirit, the constant urge to develop further and the claim to always develop the best product, Vöhringer offers its customers a unique product range. Thus, the company is able to serve the complete wood and polyurethane interior construction industry.

At the headquarters in Trochtelfingen (district of Reutlingen), 8 modern laminating lines are in operation. Here, VÖHRINGER also has a state-of-the-art carpentry. In addition to this production with warehouse and logistics on 35,000 sqm, VÖHRINGER has a further 30,000 sqm of space in Engstingen-Haid. Here there are 7 sheathing lines, 8 PU foaming lines and 7 CNC machines. The company employs around 330 people at both locations in the Swabian Alb.

With subsidiaries and joint ventures, VÖHRINGER also covers special areas such as product design and prototype construction, real wood parquet or laminate as well as system flooring (ARSRATIO in Kirchbichl/Austria).

The company is also successful abroad: production in Shanghai is geared to the Chinese market. All of VÖHRINGER's lightweight innovations are developed in the VÖHRINGER VISIONLAB at the Kehl site under the direction of Martin and Dominik Ross. Among other things, a showroom is operated at the company's headquarters in Trochtelfingen. Another, new VISIONLAB is already being planned and will be built on the Haid in Engstingen.

Fitting for the anniversary year: A first generation change

Today, the VÖHRINGER family business is headed by the brothers Jürgen and Thomas Vöhringer. In July of this year, the 4th generation, Yannick Vöhringer, joined the management team.

Vöhringer takes responsibility for the future of our planet.

But the company is not only a pioneer in lightweight construction. Vöhringer is also always one step ahead when it comes to climate protection and has set itself the goal of completely climate-neutral production by the end of its anniversary year in 2021.

The first successes in this area have already been achieved. For example, by switching to green electricity and energy-saving measures, 45% of CO2 emissions have already been reduced compared to the previous year. In addition, Vöhringer is looking beyond the end of its nose to reduce climate-damaging emissions within the supply chain wherever possible. Securing the future through responsibility is an important topic in the family business.
