

VÖHRINGER PRESS INFORMATION FOR THE CARAVAN SALON DÜSSELDORF 2024

VÖHRINGER – FEEL LIGHTNESS, EXPERIENCE SAFETY!

Just in time for the start of the Caravan Salon in Düsseldorf, Vöhringer will be presenting exciting lightweight construction solutions and innovations to the motorhome and caravan industry at its stand.

This year, Vöhringer will be demonstrating how lightweight construction goes hand in hand with safety with two lately developed products.

One of the products we would like to present here is AIRPLY®. AIRPLY® is a lightweight panel that is currently not available anywhere else on the market. We replace the poplar core with a foam. This makes furniture lighter and cheaper than using conventional plywood panels. Our AIRPLY® materials are up to 40 % lighter than conventional materials and create added value for the end customer by increasing the maximum load capacity. In combination with a patented connection system, there are also no disadvantages to be expected in terms of stability and workability. On the contrary, due to the lower dead weight, furniture made of AIRPLY® is even more stable than conventional furniture in the event of an accident.

VUNDER TECH® is another highlight that we would like to introduce to you. This innovative development for furniture components is extremely light, reliably water-resistant, extremely robust and extraordinarily versatile in terms of possible shapes. A special feature of this product is the innovative edgebanding with polyurethane. As a result, the required safety features of GSR2, which require an edge radius of at least 3.2 mm, are easily met. Conventional production methods impose restrictions on moulding when it comes to compliance. VUNDER TECH® therefore not only offers technical superiority, but also a high degree of safety and confidence for the user.

For our customers, VUNDER TECH® is a solution that significantly supports the further development and optimisation of furniture, especially for motorhomes, and also sets new trends in terms of design.

Our mission in the development of such innovations is to enable the construction of lighter, more efficient, more comfortable and safer motorhomes. Our vision is to help shape the mobility of the future while setting the highest standards in terms of quality, sustainability and safety.

We, Vöhringer, remain true to our tradition of delivering high-quality products and developing smart innovations that meet the highest standards of safety and durability. AIRPLY® and VUNDER TECH® are the result of our research and development, specifically tailored to the needs of the motorhome industry.
