

VÖHRINGER – FUTURE-ORIENTED TECHNOLOGY FOR MOBILE LIVING SPACES AT THE CARAVAN SALON DÜSSELDORF 2025

Hall 13, Booth A95

Just in time for the start of the Caravan Salon in Düsseldorf, Vöhringer will once again be presenting exciting lightweight solutions and innovative new products to the RV and caravan industry at its trade fair stand.

This year, we will present an impressive prototype showing how lightweight construction and functionality can be optimally combined. The caravan on display, which impresses with its particularly lightweight and cost-efficient construction, demonstrates the versatility of our solutions. With clever space concepts, our developments offer flexible use for a wide range of requirements, such as a swiveling outdoor kitchen – whether as a comfortable home on the road or as a versatile living space.

One highlight is **Vöhringer Airply®**, a completely new type of lightweight panel that uses a foam core instead of a conventional poplar core in furniture, resulting in a significant reduction in weight. Up to 40% lighter than conventional materials, Airply® not only offers significant savings in transport and handling, but also added value for maximum payload. Thanks to a patented connection system, stability and workability remain at the highest level. In fact, furniture made from Airply® is even more stable in the event of an accident because its lower weight increases safety.

We also present Vunder Tech® – an innovative development for furniture components that impresses with its extreme lightness, water resistance, and robustness. Particularly noteworthy is the special polyurethane coating, which meets the safety requirements of GSR2 with a minimum radius of 3.2 mm. **Vunder Tech®** not only offers technical superiority, but also a high degree of safety and design freedom in terms of shaping.

For our customers, Vunder Tech® means that the further development and optimization of furniture – especially for motorhomes – is significantly supported without having to compromise on safety and aesthetics.

Our mission is to enable the construction of lighter, more efficient, more comfortable, and safer motorhomes. With innovations such as Airply® and Vunder Tech®, we are shaping the mobility of the future and setting standards in quality, sustainability, and safety.

Vöhringer remains true to its tradition of developing high-quality products that meet the highest standards. Our innovations are the result of research and development, specifically tailored to the needs of the motorhome industry.

Visit us at the Caravan Salon Düsseldorf 2025 to see the prototype live and shape the future of caravans with Vöhringer!
