

VÖHRINGER'S PRODUCTION WILL BE CLIMATE-NEUTRAL AS OF 2021

This year, Vöhringer is celebrating its 100th anniversary. Securing the future through responsibility is the most important theme of our family business. That is why we have set ourselves the goal of completely CO₂ neutral production before the end of this year.

Dear Ladies and Gentlemen,

For many years, we have been working to reduce our ecological footprint and to achieve this through measures focusing on climate protection and the careful use of our finite resources. For this reason, we have had a certified environmental management system (DIN EN ISO 14001) since 2013 and a certified energy management system (DIN EN ISO 50001) since 2014.

As the world market leader in light-weight construction innovations for the caravan and motorhome industry, we feel obliged to produce in a CO₂-neutral manner. Because who, if not our industry, has such an important partner and friend as nature in all its diversity as a basis for good business.

And it is precisely this responsible relationship that we want to preserve and successfully continue for the next generations.

WE WANT TO BECOME PIONEERS IN CLIMATE PROTECTION IN OUR INDUSTRY

We have already started to take responsibility for a healthy climate in 2020 and can already reduce CO₂ emissions by 45% by switching to green electricity and intensive use of solar energy. This is because we were able to have a direct influence on the reduction of greenhouse gases and achieve a lot in a short time.

**WE ARE PART OF THE SOCIETY
OF VALUES AND THEREFORE
ALSO BEAR THE RESPONSIBILITY
TO PRESERVE AN INTACT AND
LIVEABLE WORLD FOR FUTURE
GENERATIONS.**

Now we want to be CO₂ neutral by the end of 2021. That means: pushing climate protection even further in 2021. We will take a closer look at the CO₂ footprint of our production, our products, our business travel, our procured goods and their logistical processes and work hard to ensure that our goal is met.

In addition, we are already working continuously to reduce our energy consumption. As a next step, we want to think outside the box to also reduce climate-damaging emissions within our supply chain where possible. Our aspiration to innovation leadership goes beyond the technical development of our products.

Our committed employees, the entire staff and the management hope that you, as a long-standing and important partner, will be as positive about this responsibility towards our climate as we are.

We look forward to your support, because one thing is certain: „We are part of the society of values and therefore also bear the responsibility to preserve an intact and liveable world for future generations. We want to live up to this aspiration through our voluntary and ambitious climate targets.“

The Executive Board
