

The flexible alternative to plywood

MODERN AND UNUSUAL SURFACES ARE CREATED WITH VFLEX.

With VFLEX, you can move beyond traditional decorative films and unlock new possibilities in surface design. As a wood-free alternative, VFLEX opens up new possibilities for custom designs—whether with a visible nonwoven surface or laminated with fabric. For surfaces that stand out from the norm.

The base material, made of special polyester fibers, is moisture-resistant, prevents rot, and is lightweight. At the same time – your efficiency bonus! – it's very easy to work with. Thanks to

its clever material structure, it also ensures excellent sound absorption in the room. And the look? The choice is yours: Use VFLEX in its pure form with a modern felt-like appearance, or opt for a wide variety of attractive coating options.

- // Base material: Various organic and inorganic materials
- // Weight: from 750 g/m²
- // Can absorb and release moisture
- // Uncoated version with a felt-like appearance; lamination options with fabrics and foils (must be individually tested for compatibility – we'll take care of that for you)
- // Typical applications: wall covering, ceiling covering, lining of storage spaces, rear garages
